

## Resuscitation Masks | Single use

The Fisher & Paykel Healthcare resuscitation masks for neonates and infants are available in different sizes to fit a range of patients. International guidelines recommend that an appropriately sized face mask should cover the mouth and nose but not the eyes, and should not overlap the chin. A good mask seal with minimized leak is important to establish effective ventilation. Careful consideration needs to be given to size, as well as mask fit and hold.

Range of mask sizes, including 35mm and 42mm diameter masks, which are suitable for your smallest patients.

Versatile connection that allows use with a self-inflating bag, flow-inflating bag and T-Piece circuit.

Masks are designed to be soft, with a transparent surface that allows breath condensate to be observed.
