Introducing the RT332 Adult Optiflow™ Circuit Kit with MicroCell™ Technology and Optiflow+ Nasal Interface

The RT332 Adult Optiflow Circuit Kit with Optiflow+ Nasal Interface is an all-inclusive solution for delivering Optiflow Nasal High Flow therapy while minimizing condensate.

- MicroCell Technology reduces condensate by up to 30% when compared with a conventional circuit.
- Less condensate may reduce interruptions to therapy due to “rain-out.”

- Heated Breathing Tube with MicroCell Technology
- Conventional Heated Breathing Tube

The RT332 Kit contains an Adult Heated Breathing Tube made of a non-permeable material with Fisher & Paykel Healthcare’s unique MicroCell technology.

- MicroCell technology forms an insulation shield between the cool air outside and the water vapor inside, locking in humidity and reducing condensation.

- Evaqua™ technology reduces formation of mobile condensate
- Comfort and confidence

The Optiflow+ Nasal Interface provides patient comfort and stability on the face.

- With its unique concave base, soft contoured prongs and cheek pads, and a customizable head strap, the Optiflow+ Nasal Interface provides patient comfort and stability on the face.

- Evaqua Tubing

Evaqua technology allows water vapor to diffuse freely through the walls of the interface tubing and, in combination with MicroCell technology, ensures that condensation is controlled every step of the way.

1. Exact percentage: 29.33%. Based on internal Fisher & Paykel Healthcare laboratory testing when compared with a conventional Fisher & Paykel Healthcare circuit.
2. Average result found in internal Fisher & Paykel Healthcare testing on Optiflow+ Nasal Interface.
